

## GTAIV PC SecuROM™ Information

### **Protected Programs:**

The PC version of GTAIV uses the following SecuROM™ protected executables:

<u>Name</u>	<u>Description</u>
LaunchGTAIV.exe	The main launcher of GTAIV
OfflineActivation.exe	Used for offline activation only
Matroschka_helper_prot.exe	The executable used for unpacking game components

### **SecuROM™ Removal:**

A normal uninstall of GTAIV will remove SecuROM™ related files (other than DRM license information, as explained below). You may also remove SecuROM™ related files by following the instructions below. Before you start the uninstallation, close all programs running in the background. The link below contains a tool that removes SecuROM™:

[http://www.securom.com/support/SecuROM\\_Uninstaller.zip](http://www.securom.com/support/SecuROM_Uninstaller.zip)

Please follow these steps:

- Download the ZIP file
- Extract the application into a temporary folder
- Launch the application and follow the instructions.  
A dialog box will appear. To start the SecuROM™ uninstallation, press the <Yes> button.  
Note that you need administrator rights to run this uninstallation utility.

Please note that this uninstallation process will not remove the SecuROM™ DRM license information. Removing the license information may result in a lost activation, or may prevent other SecuROM™ protected software on your PC from working. This uninstall process allows you to remove SecuROM-related files without losing a purchased software activation.

Note that some or all SecuROM™ files and registry keys may be re-created in their respective locations upon each launch of a SecuROM™ protected application.

### **Additional Information:**

Further information about SecuROM™ can be found here: [http://www.securom.com/support\\_faq.asp](http://www.securom.com/support_faq.asp).

If you have additional questions, please send an email to: [support@securom.com](mailto:support@securom.com).
